

## WHO WE ARE

We, AVANTI & PRARA LEATHERS, with over 25 years of experience in leather making we as a company began Finished Leather business in 2013 with a passion for leather manufacturing with a solid and controllable base of raw materials which makes us world class Finished leather makers with an Italian aroma.

We are a top quality small skin suede and grain leather producer providing sustainable ecology to future generations with our strong technical capabilities.

We integrate environmental and social principles in our businesses, ensuring that what comes from nature goes back to nature and people.

## **OUR Vision**

To be the top-quality producer of High fashion, environment friendly and sustainable Finished leather from our world Class manufacturing facilities. We will continue to be Value creators to our customers worldwide.

To be globally No #1 Fashion Finished leather producers from India in small skins (Goat & sheep) by 2025.

## **OUR Mission**

To be the most sustainable and reliable partners of the fashion leather industry taking the environment as a major factor. Lead developers and front runners in Eco friendly and Biodegradable leathers with our Responsibility to environment.

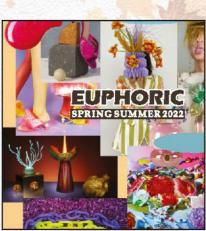

And catering to premium brands and consumers as a milestone in to our business that delivers value through Integrity in Business and Excellence in products and services.

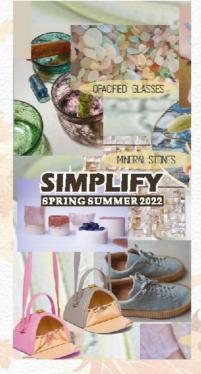

"To be a responsible value creator for all our stakeholders".

## **LITE WEIGHT LEATHERS**

### Lite weight leathers are Feather lite leathers.

The one of major core theme Spring summer 2022 is Feather lite leathers with a silky and drape feel.

However, when reducing the leather weight, the previous stability and quality properties and, in particular, the reduced flammability and fire retardancy of leather is well retained.

The weight reduction also has advantages for tanneries. In the production process, less waste water is produced and fewer chemicals are used in the tanning process and helps in Eco friendly and Sustaianility.

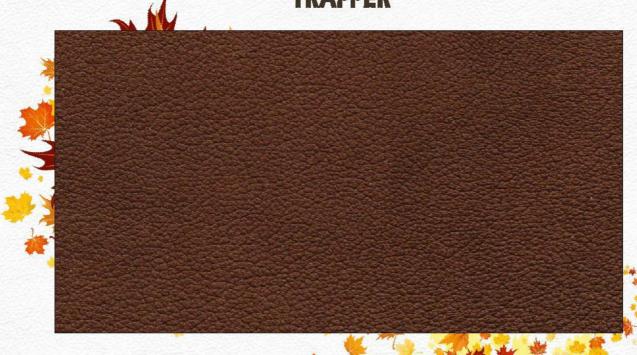

Also, withleather, a lighter weight is more comfortable to wear, perfect protection as second skin, and can offer wide range of colours.

## TRAPPER

### WALNUT

Definite pattern which ensures better cutting and round feel makes it ideal for wide range of mouldability.

Thickness : 0.7-0.9 mm

## **ECO FRIENDLY LEATHERS**

Eco Friendly leathers includes CHROME FREE LEATHERS AND METAL FREE LEATHERS.

There is significant interest in leathers that imply improved environmental performance and usage performance with almost no harm done to mankind So, how do we interpret the current situation and understand the issues surrounding the interest in "eco leathers"?

The manufacture of leather does have an environmental impact In the manufacturing process, not all the inputs end up in the leather.

What seems to have happened is that the GAUGE OF A LEATHER'S "ECO-NESS" IS MEASURED BY THE ABSENCE OF CERTAIN RESTRICTED CHEMICALS, SUCH AS BANNED AZO DYES, PCP, CHROME VI, FORMALDEHYDE AND AN INCREASING LIST SPECIFIED BY BRANDS (stringent test standard set by many European consumers like REACH and slowly being adapted by the States as well) and the method of tannage which results to consideration of the real environmental impact.

And recently with larger focus in caring for the environment, eco labels, requirements from high street retailers or those seeking to gain competitive advantage through product positioning ECO FRIENDLY LEATHERS plays a major role.

We, Avanti Prara Leathers, are THE NUMBER ONE LARGEST CHROME FREE AND METAL FREE LEATHER PRODUCERS IN INDIA in Goat and Sheep.

### <u>Advantages of Using Eco Friendly Leathers - To environment and closely related</u> <u>to SUSTAINABILITY</u>

- Non-carcinogenic, Zero Chromium Products, and can be freely used for any Children's shoes.
- Reduction of Water consumption up to 20-30%.
- -Shorter processing time.
- Cleaner effluent, TDS reduction up to 25-30% -Means the effluent solid waste TOTAL DISSOLVED SOLID coming out after manufacturing this leather is 25-30% LESS compared to normal leathers.

ECONESS → ECO FRIENDLY → GO GREEN

## **BIO DEGRADABLE LEATHERS**

Leather is a premium -class natural material and is expected to have a long lifespan. In order to achieve this long endurance, it needs a certain protection against microbiological decay. Therefore, any common combination of tanning agents (synthetic retannage) will stabilize the collagen to an extent that the leather cannot be classified as easily biodegradable if the standard for chemical products or household waste are applied.

At the end of the life cycle, if the feather article can blend back into nature and not leave any permanent traces on the waste dump, its a bonus,

One option is composting, where via biodegradation leather making process (using certain chemicals as biodegradable polymers and process) and developing biodegradable leathers which can be transformed in a valuable source like fertilizer raw materials.

We, Avanti Prara Leathers, are THE ONE OF THE LEADING BIODEGRADABLE LEATHERS' MANUFACTURES IN INDIA in Sheep and Goat

Advantages of Using Biodegradable Leathers - To environment and closely related to SUSTAINABILITY

-The BIODEGRADABLE leather manufactured by Avanthi Prara Leathers does not leave any chemical substance in the leather or its degradation products, BIODEGRADABLE means complete disposal of Finished Leather into Land/ Soil/Earth and makes it into a natural Fertilizer

-Biodegradable process (Disposing into Land/ Soil/ Earth) takes around 2-3 months to dispose and convert into natural fertilizer

The production lead time of Biodegradable leather is just like normal leather lead time.

LEATHER ORIGINATES IN NATURE AND CAN BIODEGRADE BACK INTO NATURE.

### **FODERA CLUSTER**

We Avanti & Prara Group offer wide range of Fodera collections — LINING Collections at a COMPETETIVE PRICE range WITHOUT ANY COMPROMISE ON QUALITY.

The advantage of leather lining is its excellent breathability and moisture absorption capabilities. Leather is the only lining material that can absorb up to three times its own weight in water. Leather is therefore superior in terms of breathability and moisture absorption, even when compared with high-tech materials such as microfibre, due to the fact that it consists of tiny fibres and features open pores. People who sweat easily or whose feet sweat profusely should take care to purchase genuine leather for the inner lining of their shoes.

Incidentally, leather lining is also optimally suited for wearing shoes barefoot in the summer. In addition, leather has the advantage that it is breathable, skinfriendly, supple, crack-resistant, robust, durable and retains its shape well.

Our Avanti & Prara Leather's range of Lining if offered from Goat and Sheep Base.

As the SUSTAINABILITY theory grows in this world at rapid phase, its high time that most of the brands wants to change from using PU, fabric, Microfibre to Leather Linings.

Our leather lining range includes Regular lining, Lite Weight Lining, Chrome Free Lining and Biodegradable lining matching the optics, softness, finish level, hand feel meeting tailor made customer specific needs.
